

Styling an unordered list as a menu

nigelbuckner 2014

The HTML for the list:

```
<ul>
  <li>item 1</li>
  <li>item 2</li>
  <li>item 3</li>
</ul>
```

Step 1: Target the with CSS

Remove the bullet points, margin and padding of the list

```
ul {
  list-style-type:none;
  padding:0;
  margin:0;
}
```

Step 2: Target the with CSS

Place the list items in a line, if required*. *You do not need this for a vertical menu*

```
ul li {
  float:left;
}
```

Step 3: Target the links <a> with CSS

Most of the styling to change the appearance is applied to the links

```
ul li a {
  text-decoration:none;
  color:#000000;
  background-color:#C0C0C0;
  padding: 5px 10px 5px 10px;
}

ul li a:hover {
  background-color:#FFC13B;
}
```

To prevent menu items from overlapping with a *vertical* menu, create the selector `ul li` and add the CSS property of `margin-bottom`:

```
ul li {  
    margin-bottom:15px;  
}
```

***important**

Floating list items left will cause content in the page after the menu to move up beside it. The following CSS will fix this:

```
ul:after {  
    content: "";  
    clear:both;  
    display:block;  
}
```
